

Dear FCC,

I think it is unreasonable for NAB to determine whether or not I can receive traffic and weather information on my satellite radios. I travel frequently and am often not in standard broadcast range of places that I need to have weather information; I use this to determine my travel plans. with satellite radio, I can get the information I need wherever I happen to be. Please reject NAB's petition 04-160. It is also anti-competition.

Thanks and best regards,  
Gerald Cupit
